A b o u t t h e c o l l e c t i o n

"Our collection is closely connected with our home, which is the landscape of the Bohemian foothills. A small town in a region with a rich history of glass and textile production, which has been forming our positive attitudes to art and traditional crafts since childhood.

The inspiration for our lights comes from the world of nature, the unshakeable power of the elements and the mystical distant universe and beauty of celestial bodies. We are fascinated by organic shapes with all of their perfections and imperfections. Just like the hand-made glass. Each produced piece is different, each is an original."

The Home Collection consists of lights characterised by simple natural beauty, airiness and elegance. The unique structure and lustre of the lampshades play a magic game of light and shadow in the space, sometimes underlined by the subtle colour tones of the glass.

L A M P I O N

The organic shape of Lampion pendant instantly reminds us of a known typology of a paper-made lampion, which originated in Asia and have come in all forms since. Its familiar silhouette inspired Jiri Pelcl, who designed Lampion for us and turned it into a glass art piece in your interior. It is now available in Opaque Rosa and Blue Smoke color to ensure it perfectly fits the space.

Scenery pendant catches the eye with its unique surface with bubbles and distinctive texture which very softly transmits light. It is created with cast glass and comes in vertical and horizontal form each of which brings a different angle and impression and also variety of use. Both lit and turned off, this pendant will become an extraordinary piece in the interior.

Collection with the lapidary name "1414" is a continuation of the oldest technology of glass production in Bohemia at a time when tradition was established in the region called the Crystal Valley. The large mass of glass is easily shaped, often by its own weight and gravity, and the glassmaker can effortlessly move the mass in the intended direction. This shaped glass is characterized by its distinctive optics, enhanced by light, both natural and artificial.

ORB

The planets fascinate us with their secrecy and mystique. They are invisible during the day, but they shine in the night sky, creating an atmosphere of peace and quiet. The ORB light is a sphere, the most perfect celestial shape, featuring a ring with a perfect cut where the mysteriousness and special beauty of celestial bodies come together.

W H I S P E R

Vibration, quiver, waves as well as the softness of touch at which a drop falls on the water surface. Even though it is hidden behind a layer of metal surface, it still transfers persistent emotions. The object is a moment of uniqueness of the mere time that provokes a reaction and thus creates an unrepeatable detail. It whispers, calms, captivates.

The secret is hidden inside. Inner metal layer is naturally opaque, without light. As soon as light appears and you change the angle of view, you can discover noble material with colour structure of alabaster which changes its form whenever you look at it.

A b o u t t h e c o m p a n y

The Aldit company was established by Václav Heřman and his son David in 1997, when they started to make components for household lighting. Together, they developed several manufacturing technologies and designs in the sphere of patent protected glass. Thanks to a unique feel for quality and cooperation with leading designers, the company smoothly moved to producing bespoke projection lights. David and his wife Alena now lead a large team that shares a deep resolve to constantly develop solutions focused on detail.

B I O O M

Designer Jaroslav Bejvl Jr. has devoted over ten years of his life to transforming old glass forms. Jaroslav's original objects are hand-shaped and burst with life during production. Thanks to this elemental transformation, each piece is unique. Bioom is another stage of development, unique and most perfect due to the technologies used. Gradual folding of the optical decors and hand pigmentation of the lower layers creates a unique play of light and shadows, which gives the glass mass a light touch.

B I O O M +

The Bloom + transformation process offers a touch of something special. It is the gloves of true glass masters that model the hot and unyielding mass. A shape which comes to life using this method is an exact imprint of the passion and emotion passed down through generations. However, it is not the only mark it contains. The structures are made of a unique technology of imprinting fibreglass. Thanks to this elemental transformation, each piece is an unmistakable original that breathes and shines with its own life.

D O R I C O

The Doric order is an ancient structural design characterised by sobriety and simplicity. This simplicity can sometimes serve as a manifestation of pure beauty. Dorico glass, being slender and elegant, may appear delicate and ethereal due to the combination of characteristic fluting.

D O T .

The closed world of hand-shaped glass which is brought to life by special colour layering technology. The birth of a glass shape on a blowpipe made from the first small pick through the rolling of individual layers of glass to their manual shaping using the oldest technique. Light is the birth of a new dimension of classical glass that is deliberately stored in the outer layer to protect it from everything.

design by JACOSLAV BEVLA

O u r v i s i o n

We love glass and we love light. Light is the soul of each space. Glass is an unmistakable material, which can become the most significant element in the interior despite its clear and natural appearance.

We strive to make each of our products a unique piece. Our lights excel in their timeless design and outstanding craftsmanship provided by the combination of traditional hand-blown glass and noble materials such as alabaster and hand-wrought metal.
